# CIMS GASTROENTEROLOGY AND ENDOSCOPY

## GASTROENTEROLOGY AND ENDOSCOPY

### What is Endoscopy?

An endoscopy is performed to view the inside of the body through normal opening.

### Why Endoscopy?

Endoscopy is a non invasive procedure to diagnose and, if possible to treat conditions that affect the upper and lower part of the digestive system, which include Oesophagus, Stomach, Duodenum and colon.

Using an endoscope, lesion can be diagnosed, biopsy taken and if required therapeutic procedures can be performed. Pictures of your digestive tract can be viewed on a color TV monitor.

## GASTROENTEROLOGY AND ENDOSCOPY

**The three most commonly performed endoscopic procedures are:**

### Upper GI Gastroscopy

During an upper G.I. endoscopic exam, an endoscope is passed through the mouth into the esophagus allowing the doctor to view the esophagus, stomach, and upper part of the small intestine.

### Colonoscopy

A colonoscope is passed through rectum upto caecum to view entire large colon i.e the lower part of the GI tract. If needed biopsy taken and therapeutic procedure is done..

### E.R.C.P [ Endoscopic Retrograde Cholangiopancreatogram]

It is performed to view the lesion of bile duct, Gall bladder and Pancreas. In this procedure dye is injected into bile and pancreatic duct and series of x-rays taken. Lesions such as stricture of bile duct, stone in bile duct, gall bladder and pancreatic duct are diagnosed and treated at the same time.

#### Abnormal Cases

#### Normal Cases

## GASTROENTEROLOGY AND ENDOSCOPY

**An endoscopy is performed for the following**

- ◆ To investigate the cause of nausea, vomiting, abdominal pain, difficulty in swallowing and gastrointestinal bleeding.
- ◆ To collect tissue (biopsy) samples and test for diseases and conditions, such as anemia, bleeding, inflammation, diarrhea or cancers of the digestive system.
- ◆ To treat certain conditions of digestive system, such as bleeding from the esophagus or stomach, difficulty in swallowing caused by narrowed esophagus.
- ◆ To remove polyps from colon and stomach.
- ◆ Endoscopy can also be used to remove foreign objects lodged in your upper digestive tract.
